Quote in the conversation.

Help buyers understand the equipment. Help PAC build and explain the right proposal.

Two independent local demos: a product Website and a Sales Workspace for scope, configuration, review and customer discussion.

SALES WORKSPACE

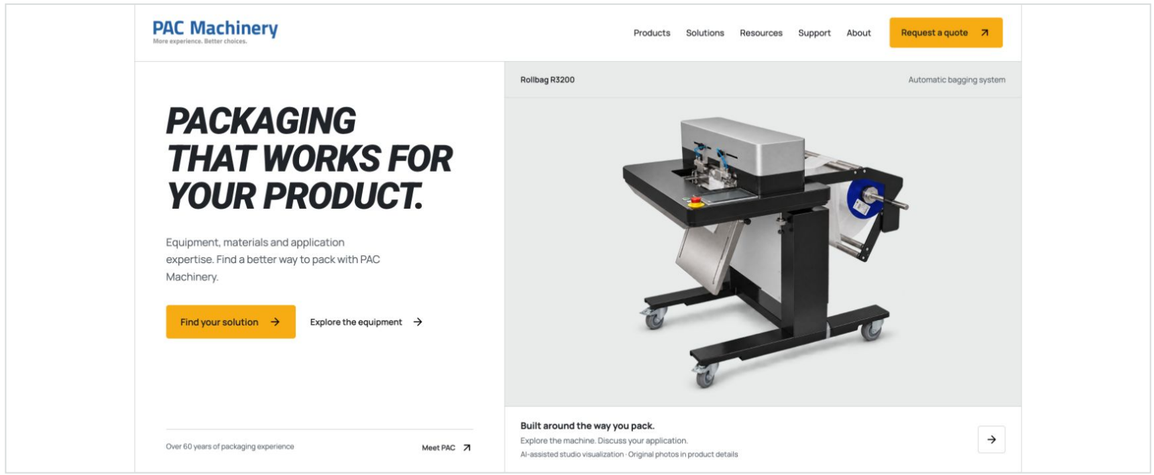

Explain the equipment choice.

Captured seller proposal · Two alternatives for an illustrative customer. Independent customer access uses a separate recipient link.

WEBSITE

Make the equipment easier to understand.

Captured Website buyer view · Homepage studio image is AI-assisted; original equipment photographs are available in product details.

> Start with PAC's priority: a quoting system and proposals the team can present with confidence.

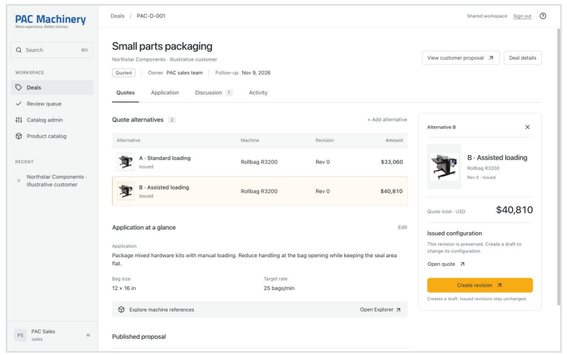

Build structure into the sales conversation.

PAC’s priority: quote live, review before release, and present a clear equipment choice.

PAC wants a higher win rate and a shorter time to close. Make scope, equipment choices and review part of one repeatable sales process.

CORE QUOTING TRIAL

Sales Workspace

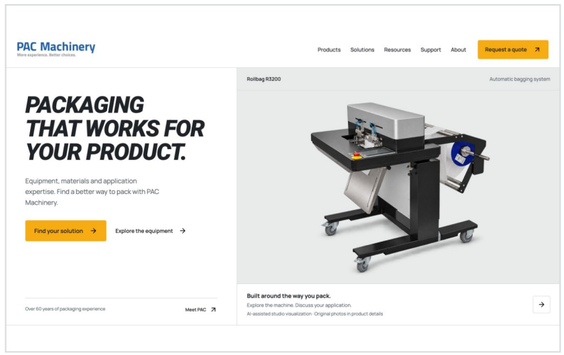

Build, review and present.

Capture the application. Configure and review the quote. Explain the options, price difference and next decision.

SEPARATE BUYER EXPERIENCE

Website

Understand before asking.

Use product context, relevant media and the reference Explorer to help buyers bring a useful application question.

~10 min Reported quote preparation

Within 24 hr Reported customer turnaround

Reported baseline from PAC discovery · Preparation time and customer turnaround are different measures.

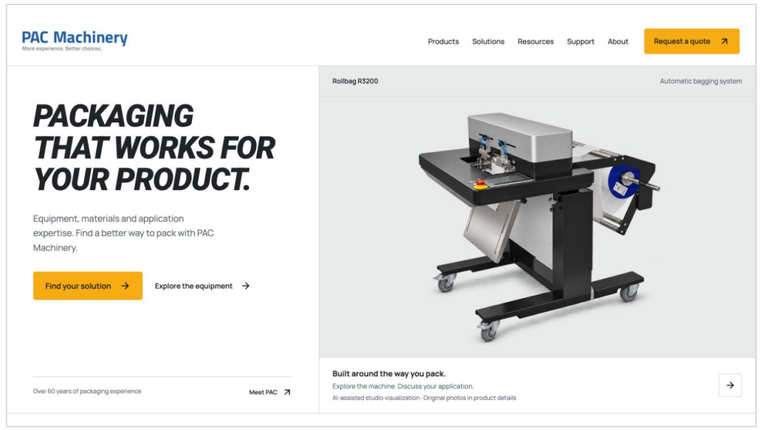

> Evaluate the Sales Workspace first. The Website supports equipment understanding as a separate experience.

A better-informed equipment conversation.

Help buyers understand what to ask before they discuss their application with PAC.

The Website is a separate experience: product context, equipment media and an inquiry with a useful reference. It does not automatically create the prepared sales deal.

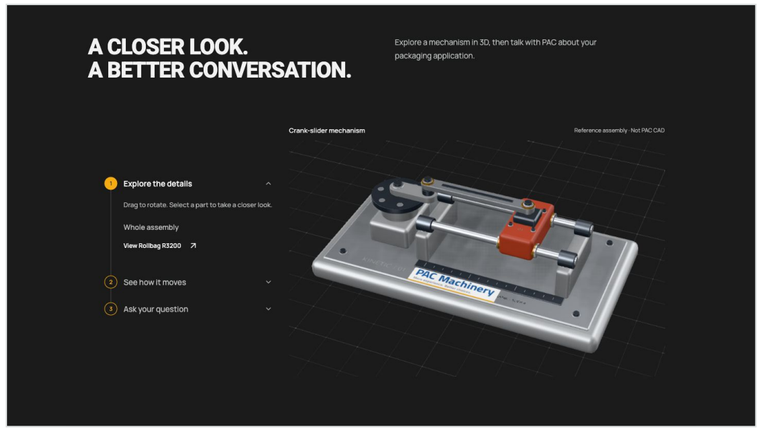

PRODUCT CONTEXT

Make the equipment tangible.

Captured Website preview · The homepage uses a labeled AI-assisted studio visualization; original equipment photographs are in product details.

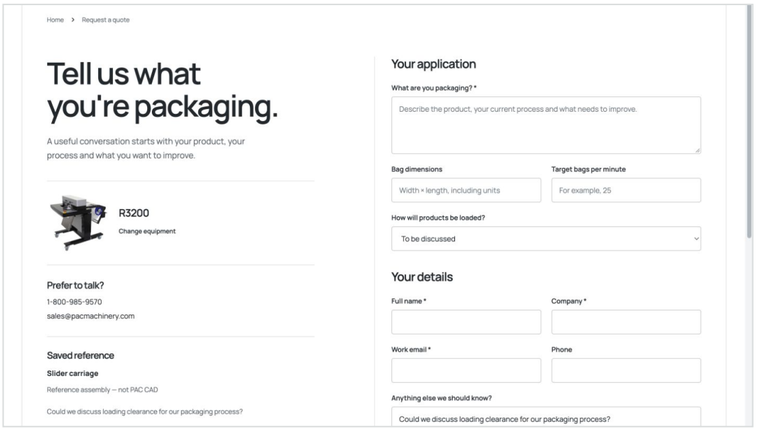

EXPLORE

Let the buyer point to a question.

Captured Website preview · The crank-slider assembly demonstrates interaction. It is not PAC equipment or approved PAC CAD.

ASK

Keep the inquiry in context.

Captured Website preview · Inquiry is independent from the Sales Workspace; PAC email routing and CRM integration are not connected.

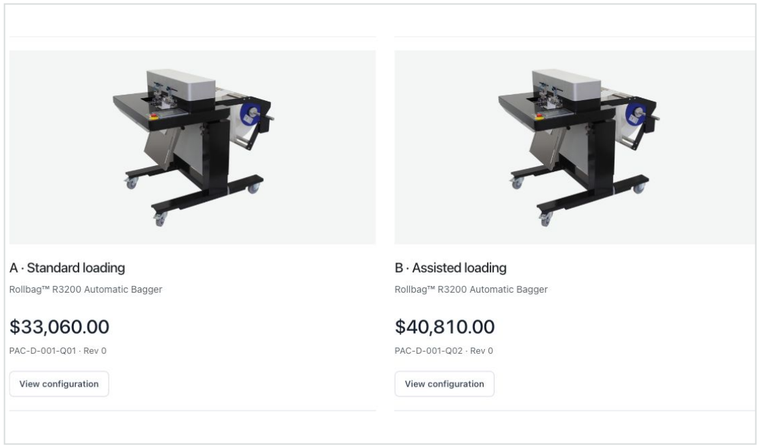

> Website preview: product understanding and clearer questions. The quoting trial below focuses on the separate Sales Workspace.

From a clear proposal to a confident next step.

One deal holds the alternatives, configuration, published versions and customer discussion.

Present the equipment alternatives, then show the application, configuration and required review behind them. Use revision history as proof that issued work is preserved.

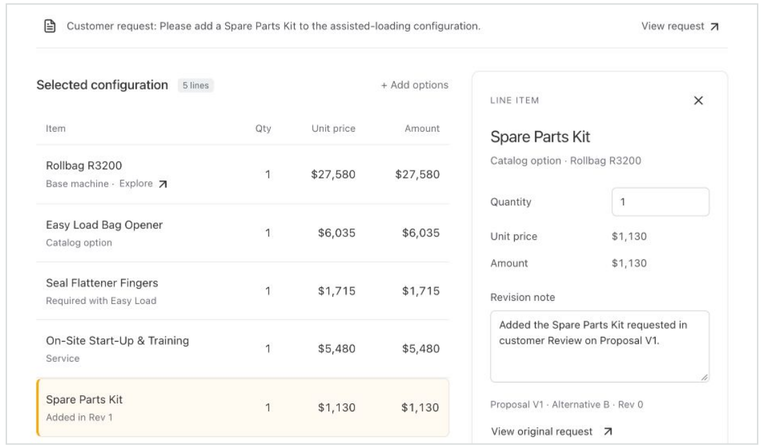

1 Customer proposal

Explain the choice.

Captured seller proposal · V1, A and B at Rev 0. The recipient link opens the same published scope with customer feedback.

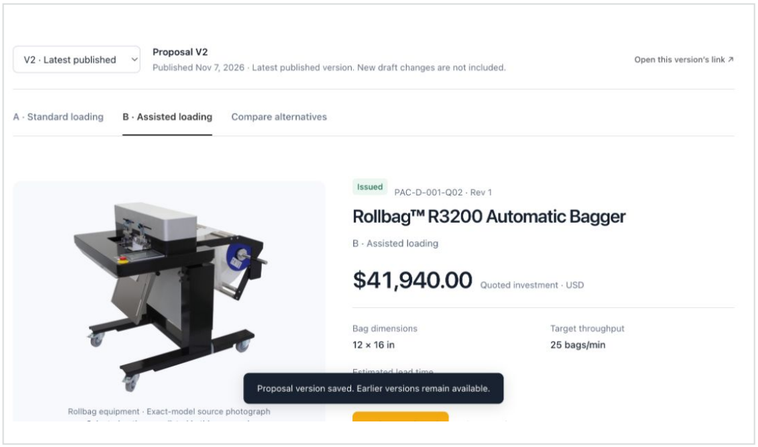

2 Saved revision

Respond with the scope in view.

Captured rehearsal · Alternative B, Rev 1 draft with a $1,130 Spare Parts Kit. Draft changes are separate from the published proposal.

3 Published proposal

Publish the change. Preserve the record.

Captured rehearsal · Proposal V2, Alternative B. Sample equipment prices in USD; these are not Annora subscription prices.

Working local demonstration: configuration, save, revision, review and publication. PAC's production identity, integrations and approval policy remain to be agreed.

Your scenarios. Two weeks. A clear evaluation.

A working trial of quoting, presenting and responding to customers, with guided setup and a joint results review.

Proposed starting scope - to be agreed with PAC before the trial begins.

One product family

Confirm the Rollbag family, price source and option rules.

2-3 PAC participants

Name the sales users and the reviewer who will evaluate the work.

3-5 quote cases

Cover standard options, an engineering requirement, review and a customer decision.

WHAT THE TRIAL INCLUDES

- A usable evaluation environment for the agreed product family
- 3-5 completed quote cases and a reviewed comparison of alternatives
- Configuration, price and lead-time checks; a shared scorecard and remaining gaps

The Website remains a separate review preview. A full Website rollout, additional machine families and new integrations require an agreed scope. Approved PAC CAD is not a prerequisite for this quoting trial.

> Day 1 starts when the environment, access, source cases and participants are ready.

Agree the test. Observe the work.

Use matched quoting cases and a shared scorecard, then decide together.

Before Day 1

Get ready

Confirm access, cases, pricing sources, users, success criteria and the decision date.

Days 1-2

Set the baseline

Walk through the workflow and measure current quote preparation on matched cases.

Days 3-12

Use the workflow

Begin with guided tasks, then let PAC users repeat the work with less assistance.

Days 13-14

Review together

Review results and gaps. Agree whether to continue and what paid use would cover.

SHARED SCORECARD

Complete the work

Core acceptance

PAC users complete their assigned core tasks without Annora operating the interface. Record help and blockers.

Control release

Core acceptance

Unpriced engineering work remains non-final; required approval identifies the reviewer before release.

Match approved sources

Core acceptance

Required scope, options, prices and lead times reconcile with PAC's approved references.

Preserve the record

Core acceptance

The requested change appears in a new revision; earlier issued proposals remain unchanged.

> Agree pass criteria before Day 1. Compare task time, assistance and reviewer understanding; measure turnaround separately.

Prove the workflow. Earn continued use.

Two weeks free. Paid use begins only after we both confirm scope, price and support in writing. No automatic charges.

Proposed: one product family · 2-3 PAC participants · 3-5 quote cases

TRIAL WORK	OUTPUT	ACCEPTANCE
Standard quote	Saved quote and PDF: scope, options, price and lead time.	Required information is complete. Options, prices and lead times match PAC's approved sources.
Engineering / special	Reason, hours, materials and delivery conditions.	Unpriced work stays non-final. Returned work is resubmitted; authorized review is recorded before release.
Customer decision	Alternatives, feedback and a revised proposal.	PAC users explain the price difference and record feedback. Earlier issued versions stay unchanged.

WHY CONTINUE

Repeat a reliable sales process

Scope, configuration and review stay together, from one rep and one quote to the next.

Keep product knowledge current

PAC maintains agreed prices and rules, with defined Annora support and maintenance.

Keep the decision moving

The buyer's next decision and PAC's internal follow-up stay distinct, with the right proposal history.

PAC operates the agreed tasks. We review completed cases, source checks, assistance needed and remaining gaps.

The Website is a separate preview. Rollout, CRM, SSO, email, documents, signing and payment need agreed scope and readiness checks.
